: <http://www.industriassanz.es/producto/special-containers/?lang=en>

Conical or cylindrical containers (with metal or plastic lid; with cap or easy open); combined containers with plastic or metal ring (in the case of conical containers). Endless possibilities in order to hold a multitude of different products, from water-based paints and varnishes to solvents and abrasive products.

CONTAINER DETAILS

For almost any type of product, these containers are especially designed to meet any of the client's special needs. In the case of combined containers, bicomponent products of many kinds. Also, plastic cap and easy open containers are designed for products requiring a different opening from our standard openings.

MAIN CHARACTERISTICS – Common to all formats:

- The containers can be supplied externally lithographed. - Approved for the transportation of dangerous goods in accordance with UN regulations.

MAIN CHARACTERISTICS – For combined conical:

- This product comprises a conical container from our 230 mm diameter range; and pie dish type container of around 2.5 litres capacity. - Highly resistant and watertight pressurised lid with leaf spring closure. - Takes up less space in your warehouse thanks to a stacking system, requiring less storage space. - The containers can also be internally varnished for water-based products.

MAIN CHARACTERISTICS – For combined cylindrical:

For combined pressurised lid containers: - Highly resistant and watertight pressurised lid. - Takes up less space in your warehouse thanks to a stacking system, requiring less storage space. - In the case of pressurised lid cylindrical containers, these can also internally varnished for water-based products. For combined containers with plastic cap (only containers located in the upper zone): Especially designed to hold low viscosity liquid products. Possibility of incorporating plastic cap into the lid; can be extendible or screw cap (57, 42 or 24 mm diameter), child safety cap or brush-cap.

MAIN CHARACTERISTICS – For containers with plastic lid:

Especially designed to hold high viscosity liquid products.

MAIN CHARACTERISTICS – For containers with “easy open” system:

- High watertightness. - Easy to open.
